Real-Time Monitoring | Resource Management | Analytics

Problem Statement

- Lack of centralized monitoring of IT infrastructure across multiple labs and buildings.

- Faults are reported manually leading to delays and mismanagement.

- Difficulty in tracking and resolving issues efficiently due to unstructured communication.

- No real-time visibility of system health and resource utilization.

- Inefficient management of resource requests and approvals.

No Centralized
Monitoring

Manual Fault
Reporting

Unstructured
Communication

No Real-time
Visibility

Inefficient Resource
Management

Solution

NexusGrid is a centralized platform that monitors, manages and optimizes IT infrastructure in real-time.

Centralized monitoring of all systems & devices

Instant QR code based fault reporting

Structured resource request & management

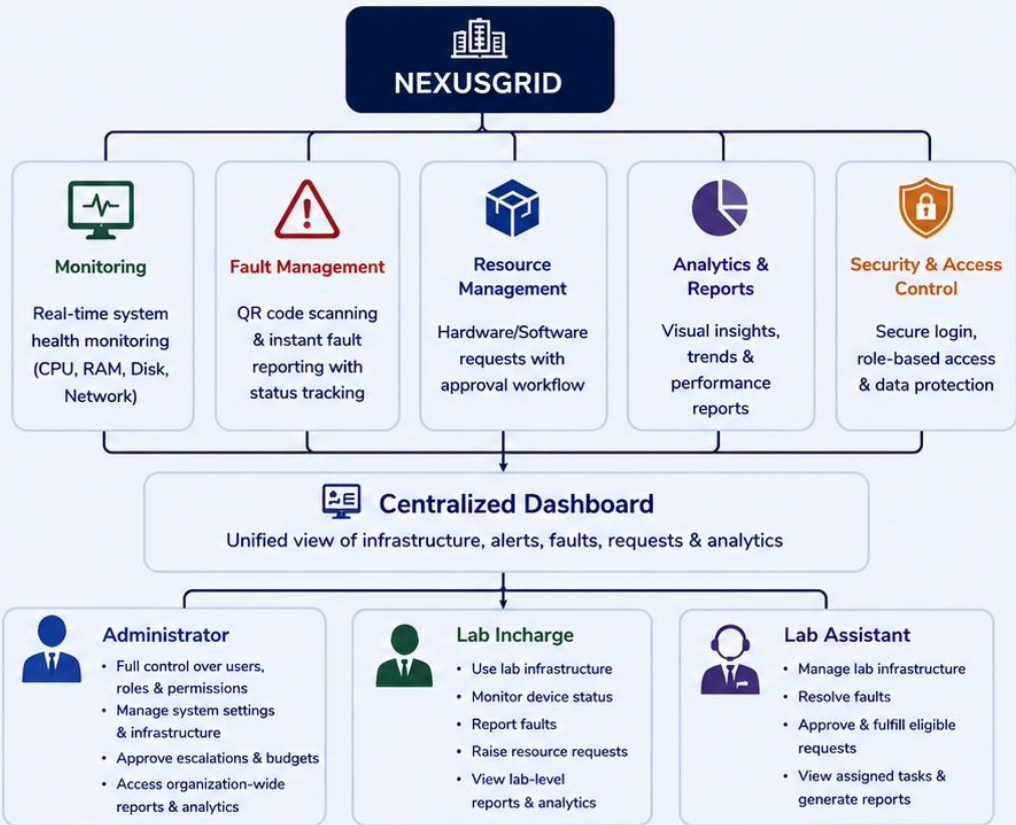

Role-based dashboards for different users

Interactive infrastructure layout & tracking

Analytics & reports for better decision making

System Overview

Centralized IT infrastructure management

Real-time monitoring of systems and devices

Hierarchical infrastructure layout

Automated fault reporting and tracking

Resource request and maintenance management

Analytics and reporting dashboard

NEXUSGRID

Infrastructure Management

Buildings, Floors,
Labs, Devices

Monitoring & Telemetry

Real-time health,
performance & alerts

User Access & Security

Role-based access,
authentication

Fault Management

QR code reporting,
incident tracking & resolution

Resource Requests

Request, approve &
manage IT resources

Central Dashboard

Unified view of operations, insights
and performance reports

Colleges

Offices

Computer Labs

Shared Workspaces

Key Features

- **Centralized Infrastructure Management**

Manage all buildings, floors, labs, devices, software and resources from a single unified platform.

- **Real-Time Monitoring & Alerts**

Continuously monitor system health and resource utilization with instant alerts and notifications.

- **Fault & Incident Management**

Report, track and resolve faults efficiently using QR-based reporting and automated workflows.

- **Resource Request & Workflow Automation**

Raise, approve and manage hardware/software requests with structured, role-based workflows.

- **Analytics & Reporting**

Visual dashboards provide insights on performance, fault trends and resource usage for data-driven decisions.

User Roles

NEXUSGRID follows a role-based access model to ensure secure, efficient and structured management of IT infrastructure.

Secure access with role-based permissions and data visibility.

Every role has a dedicated dashboard and relevant functionalities.

Improves accountability, transparency and operational efficiency.

Streamlines workflows and enhances collaboration across departments.

Supports better decision-making with role-specific insights and reports.

Administrator

Complete control over the NexusGrid platform, users, infrastructure, reports and resource approvals.

- Manage users, roles & permissions
- Configure system settings
- Manage all buildings, labs & infrastructure
- Approve escalated resource requests & budgets
- Access organization-wide reports & analytics

Lab Incharge

Responsible for supervising assigned laboratories, monitoring infrastructure health, and reporting operational issues.

- Monitor assigned lab infrastructure & device status
- Report hardware, software & network faults
- Raise resource requests for lab requirements
- View lab-level reports & analytics

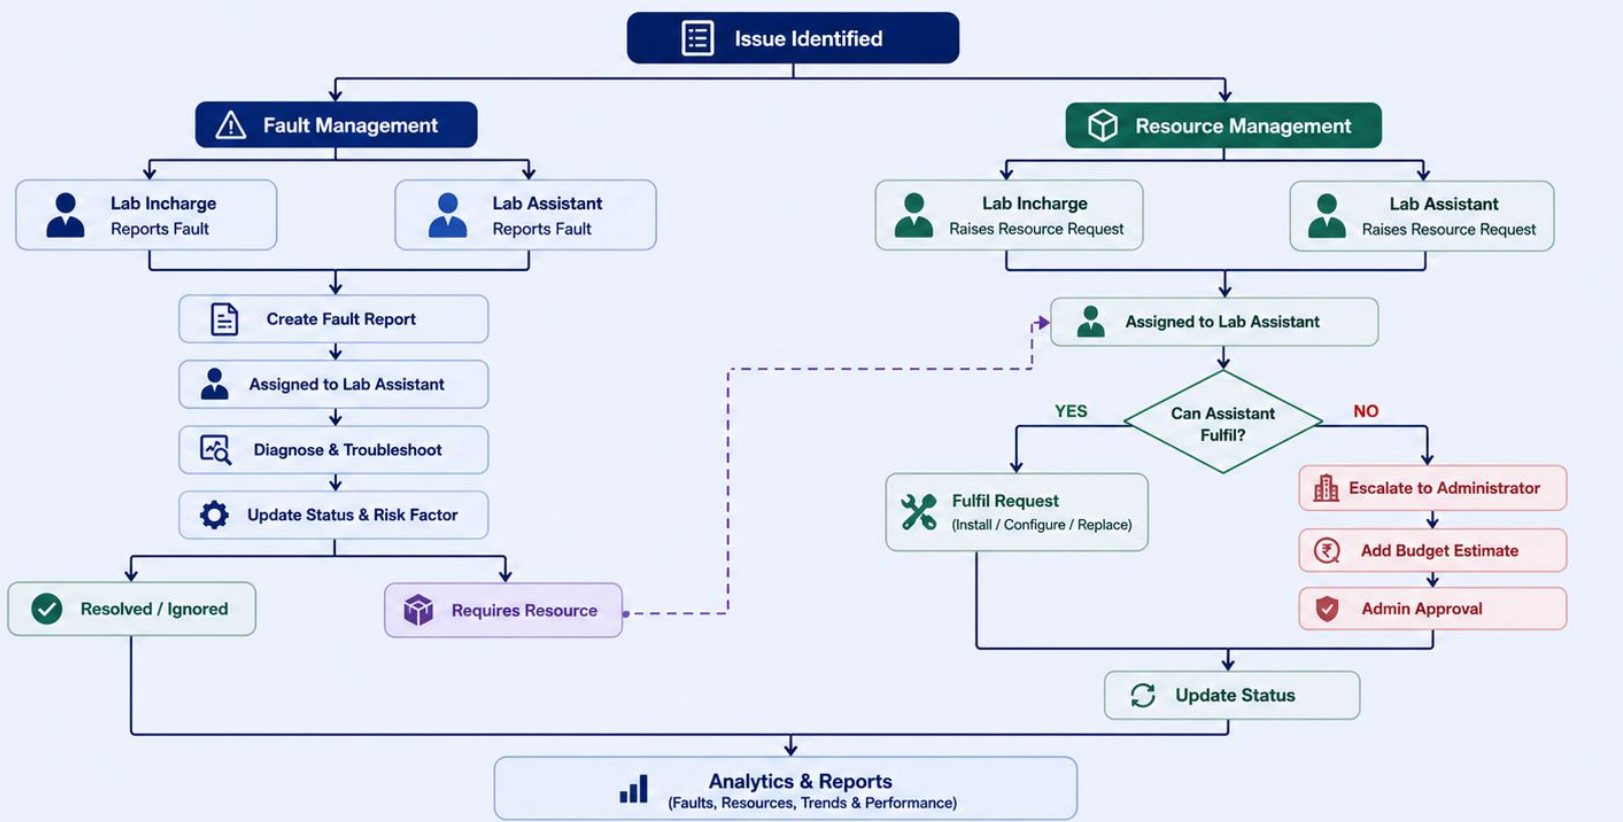

Lab Assistant

Responsible for day-to-day infrastructure maintenance, fault resolution and resource management.

- Manage assigned lab infrastructure
- Diagnose & resolve reported faults
- Approve and fulfill eligible resource requests
- Raise and track maintenance/resource requests
- View assigned tasks & generate reports

Workflow Overview

Thank You!
